Profile Summary

AWS Certified DevOps Engineer who turns unstable, manually managed infrastructure into automated, self healing systems. Led a Helm configuration overhaul at TPS Worldwide that made production deployments 90% more resistant to pod crashes, and built Python based drift detection tooling that cut configuration audit time by up to 90%. Hands on across Azure DevOps, GitHub Actions, Kubernetes, and Terraform on enterprise payment platforms; previously cut deployment time 60% across 10+ microservices at HulHub Pakistan while sustaining 99% uptime.

Education

Institute of Business Administration (IBA)

MS in Artificial Intelligence

Aug 2026 – Present

National University of Computer and Emerging Sciences (FAST-NUCES)

BS in Computer Science

Sep 2021 – Jun 2025

Skills

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, GitLab CI/CD, Linux, Bash, Apache, Nginx, SonarQube, Helm, Oracle Cloud

Languages: Python, C/C++, C#, JavaScript/TypeScript, SQL, HTML/CSS

Frameworks/Libraries: React.js, React Native, Tailwind CSS, TensorFlow, PyTorch, Scikit-Learn, Pandas, NumPy, OpenCV

Tools: Git, VS Code, Google Colab, MS Office

Experience

DevOps Engineer, TPS Worldwide

Feb 2026 – Present

- Owned the Helm Cleanup initiative end to end, replacing inconsistent and unsynced configurations with a clean, standardized setup, making Kubernetes deployments 90% more resistant to pod crashing and cutting configuration fix time from hours to minutes.
- Built Python automation for ConfigMap drift detection and deployment YAML comparison, making configuration audits 80–90% faster and significantly less error prone than manual review.
- Streamlined VM provisioning and Kubernetes service deployment through the internal Deployment Hub, reducing manual steps in releasing the IRIS payment platform.
- Contributed to CI/CD pipeline development for Platform X using GitHub Actions and Kubernetes, supporting reliable multi stage releases.
- Analyzed and improved Azure DevOps pipelines spanning build, artifact, release, and deployment stages for the IRIS payment platform.
- Created and maintained production Kubernetes resources Deployments, ConfigMaps, and ServiceMonitors, underpinning platform reliability.

Associate DevOps Engineer, HulHub Pakistan

May 2025 – Jan 2026

- Automated Jenkins CI/CD pipelines across staging, QA, and production for 10+ microservices, cutting deployment time by 60%.
- Developed Terraform modules to provision scalable AWS infrastructure and disaster recovery environments.
- Managed Linux production servers, Apache/Nginx configuration, and CloudWatch based monitoring while sustaining 99% uptime.

Machine Learning Intern, State Bank of Pakistan

Jun 2024 – Aug 2024

- Researched machine learning and computer vision techniques for currency note authentication.
- Explored mobile-based detection approaches to improve authentication accuracy in the field.

Projects

- Anomaly Detection in CCTV Footage (FYP)** – Built a real-time anomaly detection pipeline using CNNs and Vision Transformers to flag unusual activity in live video streams. *Python, Flask, ViT*
- MERN Deployment on AWS** – Deployed a full MERN stack application on AWS using EC2, S3, and RDS, taking it from local codebase to a live, production-hosted service.
- Blue-Green Deployment** – Implemented a zero-downtime deployment strategy for an ML web app using Docker and NGINX, enabling seamless version switching with no service interruption.
- FIFA World Cup Predictor** – Built a regression-based model on historical World Cup data to predict match outcomes.
