Profile Summary

AWS Certified DevOps Engineer with hands on experience in CI/CD automation, Kubernetes orchestration, cloud infrastructure, and deployment engineering. Worked on enterprise scale payment platforms at TPS Worldwide, contributing to Azure DevOps pipelines, GitHub Actions workflows, Kubernetes deployments, and infrastructure automation. Experienced in building Python based automation tools to reduce repetitive DevOps tasks, optimize deployment processes, and improve large scale configuration management. Previously automated multi environment delivery pipelines at HulHub Pakistan using Jenkins, Terraform, AWS, Docker, and Linux based production systems.

Education

National University of Computer and Emerging Sciences (FAST-NUCES)

BS in Computer Science

Sep 2021 – Jun 2025

Skills

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, GitLab CI/CD, Linux, Bash, Apache, Nginx, SonarQube

Languages: Python, C/C++, C#, JavaScript/TypeScript, SQL, HTML/CSS

Frameworks/Libraries: React.js, React Native, Tailwind CSS, TensorFlow, PyTorch, Scikit-Learn, Pandas, NumPy, OpenCV

Tools: Git, VS Code, Google Colab, MS Office

Experience

Associate DevOps Engineer, TPS Worldwide

Feb 2026 – Present

- Worked on CI/CD workflows for the IRIS payment platform, analyzing Azure DevOps pipelines across build, artifact, release, and deployment stages.
- Improved deployment automation using an internal Deployment Hub by streamlining VM provisioning and Kubernetes based service deployments.
- Contributed to CI/CD pipeline development for Platform X using GitHub Actions and Kubernetes.
- Built Python automation tools for ConfigMap drift detection, deployment YAML comparison, Dapr validation, Helm values extraction, and Kubernetes configuration analysis.
- Created and maintained Kubernetes resources including Deployments, ConfigMaps, and ServiceMonitors.

Associate DevOps Engineer, HulHub Pakistan

May 2025 – Jan 2026

- Automated Jenkins CI/CD pipelines for staging, QA, and production environments supporting 10+ microservices, reducing deployment time by 60%.
- Developed Terraform modules to provision scalable AWS infrastructure and disaster recovery environments.
- Managed Linux production servers, Apache/Nginx configuration, CloudWatch monitoring, and AWS security optimization while maintaining 99% uptime.

Machine Learning Intern, State Bank of Pakistan

Jun 2024 – Aug 2024

- Researched machine learning and computer vision techniques for currency note authentication.
- Explored mobile-based detection approaches to improve authentication accuracy.

Projects

- **Anomaly Detection in CCTV Footage (FYP)** – Real-time anomaly detection using CNNs and Vision Transformers. *Python, Flask, ViT*
- **MERN Deployment on AWS** – Deployed MERN stack application using EC2, S3, and RDS.
- **Blue-Green Deployment** – Implemented zero-downtime deployment strategy for an ML web app using Docker and NGINX.
- **FIFA World Cup Predictor** – Built regression-based prediction model using historical World Cup data.
